E-COMMERCE PACKAGING MACHINE

BROCHURE • 2026

END THE PACKING BOTTLENECK IN YOUR WAREHOUSE

E-commerce packaging machine: bagging, labelling and sealing in one 3-second pass.

The operator drops the item. Paketör reads the barcode, cuts the mailer from a roll, bags the item, seals it, prints and applies the shipping label and sends the parcel down the conveyor.

**600-900**

parcels / hour

1

operator is enough

0

manual label matching; barcode-verified

~4.5 mo

typical payback (1,500 orders/day)

You know that packing bench.

Every e-commerce warehouse past 300 orders a day has the same bench: a pile of mailers, a roll of tape, scissors, a label printer. Three people pack from morning to night; on sale days orders still slip to tomorrow. Paketör exists to remove that bench.

CRITERION	MANUAL BENCH	TABLETOP BAG SEALER	PAKETÖR (AUTOMATIC)
Time per parcel	25–40 s	15–20 s	3–6 s
Bag opening / item placement	By hand	By hand	Automatic, cut from roll
Shipping label	Separate printer, by hand	Separate printer, by hand	Printed on scan, applied automatically
Order–label mismatch	Possible	Possible	Barcode–verified
Bag inventory	3–4 sizes of pre-made bags	3–4 sizes of pre-made bags	One roll, every length
Staff for 1,000 parcels a day	3 people	2 people	1 operator

HOW IT WORKS

Four steps, all inside the machine; the operator only drops the item.

01

Scan

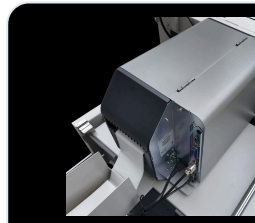

The barcode on the packing slip or item is read; the system identifies the order and prepares bag length and label.

02

Automatic bag opening

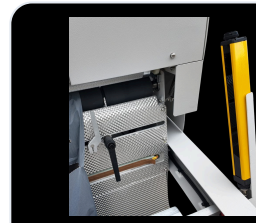

The mailer is drawn from the roll and opened by an air jet in front of the operator; the item is dropped on the belt.

03

Label in sync

The SATO industrial printer prints the shipping label and the machine applies it to the parcel.

04

Heat seal and exit

Two-hand start; the light-curtain-guarded heat jaw seals the bag and the conveyor carries the parcel to the cart.

CONNECTS TO YOUR SYSTEM

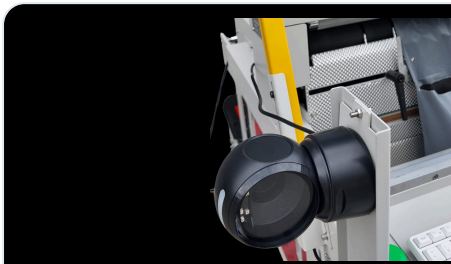

Prints the shipping label your system already produces: Amazon, Shopify, WooCommerce, regional marketplaces, ERP/WMS or a carrier integrator. Works with anything that outputs PDF/ZPL; no separate data entry.

CONSUMABLES

Standard perforated mailer rolls (PE / co-extruded) from any packaging supplier. No proprietary bags; branded rolls are available. Roll change is tool-free and takes two minutes.

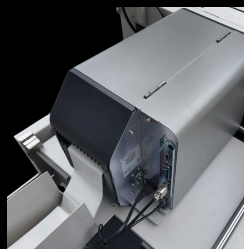

What the machine is built from.

Every module is industrial grade, chosen for round-the-clock e-commerce shifts.

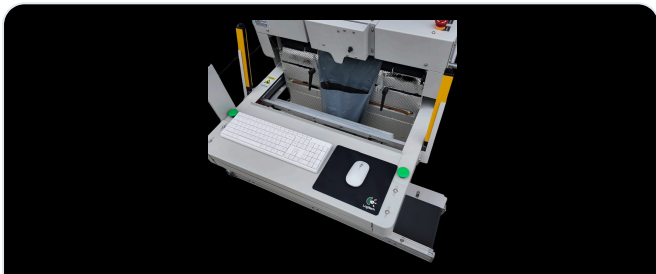

Omnidirectional barcode reader

Reads the slip or item barcode from any angle. The operator's hands stay free.

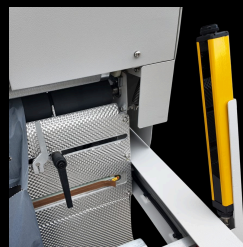

SATO CL4NX thermal label printer

Industrial class; any standard 4×6 carrier or marketplace label. ZPL/Zebra compatible.

Wide operator console

Keyboard, mouse and two-hand start buttons. One station, a full shift, without fatigue.

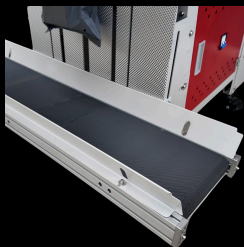

Light curtain and seal jaw

If a hand approaches while the jaw closes, motion stops instantly. The heated jaw gives a flat, tight seam.

Perforated roll bag unit

Standard rolls 250–550 mm wide; length is cut to the item automatically. Tool-free change.

Motorised exit conveyor

Carries the sealed parcel to the cart; the operator never stops to clear the bench.

HLZN touch panel + Windows PC

Seal temperature, bag length and speed from one screen. Order details on a 24" monitor in front of the operator.

Emergency stop and adjustment lever

One-touch stop; bag width is set without tools.

SPECIFICATIONS

Paketör PK-220 technical specifications

MODEL	Paketör PK-220
THROUGHPUT	600 – 900 parcels / hour (depends on item size)
BAG WIDTH RANGE	250 – 550 mm, adjustable jaw
BAG TYPE	Perforated PE / co-extruded grey-black mailer roll
LABEL PRINTER	SATO CL4NX industrial thermal (ZPL / Zebra compatible), 100×150 mm labels
BARCODE READER	Fixed, omnidirectional, 1D / 2D
CONTROL	HLZN industrial touch panel + Windows PC, 24" monitor
SAFETY	Infrared light curtain, two-hand start, emergency stop
SOFTWARE	Any system exporting PDF / ZPL labels: Amazon, Shopify, WooCommerce, marketplaces, ERP / WMS, carrier integrators
POWER	220 V single phase, 16 A
AIR	0.6 – 0.8 MPa dry compressed air (compressor not included)
FOOTPRINT	About 2 × 3 m including conveyor; on castors
INSTALLATION	1 day on-site installation + operator training, included
SERVICE	Spare parts stocked in Türkiye; remote support; export with installation available
ORIGIN	Manufactured in China; imported and serviced by MFY Yazılım, Konya, Türkiye

WHAT YOU NEED FOR INSTALLATION

- About 2 × 3 m of floor space
- 220 V, 16 A outlet
- Small compressor (0.6–0.8 MPa)
- Access to the panel or ERP that exports labels as PDF/ZPL
- Perforated mailer rolls 250–550 mm wide

WHICH PRODUCTS?

Apparel, shoe and cosmetics boxes, accessories, spare parts, books: anything that fits a 250–550 mm wide mailer. Multi-item orders go in one bag; length is cut to the height of the stack.

How the machine pays for itself in 4–6 months

A warehouse shipping 1,500 orders a day needs three benches and three packers. With Paketör one operator does the same volume in about 2.5 hours.

- **At least 2 fewer packers** (salary, social security, meals)
- **Zero tape cost**; one roll instead of 3–4 sizes of pre-made bags
- **Zero mislabelled returns**: no round-trip shipping, no lost customers
- **On peak days** no temporary staff and no late-dispatch penalties

Run your own numbers: paketor.com.tr/en/packaging-machine-roi-calculator/

EXAMPLE PAYBACK TABLE

Parcels per day	1,500
Manual packing (3 people)	8 hours
With Paketör (1 person)	~2.5 hours
Staff freed up	2 people
Typical payback	~4.5 months

LIVE DEMO

Bring your own products and pack for an hour at the machine.

Bring a box of items: the smallest, the largest and the best seller. Time it with a stopwatch, inspect the seal and label in your hands. The demo is free, by appointment; if you cannot travel to Konya, ship us your products and we pack them on a live video call and send them back. The same day you receive a quote with conveyor, printer and roll-width options and a payback table. Export with shipping, installation and remote support is available.
